PROFESSIONAL SUMMARY

Strategic Product Leader with 7+ years of experience spearheading enterprise data, AI, and digital transformation initiatives across FinTech, EdTech, and Aviation. Concurrently managing three high-impact enterprise data products at American Express, maintaining 92% on-time execution while directing agentic AI development, GCP migrations, and a zero-to-one customer intelligence platform impacting 25M+ cardmember journeys. Expert in agent-to-agent (A2A) orchestration and Responsible AI frameworks, translating complex business requirements into data-driven roadmaps that align cross-functional engineering and executive stakeholders. PMP-certified with deep technical proficiency in BigQuery, Vertex AI, and SQL, consistently delivering measurable outcomes, including 45% faster data retrieval, 60% accelerated compliance reporting, and 40% reduction in processing latency.

SKILLS

Strategic & Business Skills: Roadmap development (RICE, MoSCoW), KPI/milestone tracking, lifecycle management, problem framing, persona/journey mapping, competitive market analysis, executive stakeholder alignment, change management, and B2B/B2C GTM execution.

AI & Emerging Technology: Strategic AI/ML use case identification | GenAI adoption | Recommendation engine Architecture | Agent orchestration | AI experimentation frameworks | Responsible AI practices and emerging tech research.

Delivery & Experimentation: Backlog and requirements prioritization | user stories | acceptance criteria | Agile (Scrum/Kanban) sprint planning | A/B and multivariate testing | hypothesis-driven development | MVP validation.

Leadership & Client Engagement: Executive Stakeholder Alignment | Client Engagement & Relationship Management | Cross-functional Leadership | Workshop Facilitation | Change Management | Program Management, cross-functional UX collaboration, journey mapping, and retention/onboarding optimization.

Data & Analytics: OKR and success-metric definition | enterprise dashboarding (Power BI, Looker) | SQL/Python data Modeling | Experimentation analytics | conversion funnel/cohort analysis.

Cloud, Tools & Compliance: Cloud infrastructure (AWS, Azure) | Microservices (ECS, Lambda, Step Functions) | JIRA | Confluence | Optimizely | REST API integration | FERPA/GDPR/RBAC secure data governance.

PROFESSIONAL EXPERIENCE

American Express

Senior Product Manager

October 2025 – Present

- Identified a critical gap in real-time customer intelligence at American Express and conceptualized a zero-to-one AI-powered platform from the ground up, pioneering an enterprise AI agent behavioral tracking framework and event-driven architecture that unlocked personalization across 25M+ cardmember journeys and 5 net-new journey categories, directly expanding revenue-generating customer touchpoints at scale.
- Recognized an opportunity to modernize legacy data access infrastructure and spearheaded agentic chat and search capabilities into the enterprise historical database using A2A orchestration, metadata management, and Responsible AI frameworks on GCP/BigQuery, reducing data retrieval time by 45%, accelerating compliance reporting by 60%, and enabling 15+ downstream teams to access audit-ready datasets.
- Architected an end-to-end GCP cloud migration and AI-enhanced entity-resolution upgrade for the enterprise network graph database, coordinating 4 cross-functional engineering pods across BigQuery, Vertex AI, Cloud Composer, and Graph ML to expand entity linkage coverage across 12 business domains and reduce processing latency by 40%.
- Directed concurrent strategy and delivery across 3 enterprise data platforms, aligning 25+ stakeholders across engineering, data science, and data governance through OKR-driven prioritization, achieving 92% on-time delivery across a complex, multi-product portfolio.
- Established a cross-product OKR framework and executive dashboards in Tableau and Looker, improving roadmap predictability by 35% and securing multi-quarter executive buy-in for AI and data infrastructure investments.

Capgemini
Product Manager

February 2025 – October 2025

- Challenged a banking client's leadership hypothesis through a rigorous behavioral audit of their content platform, identifying internally generated subscriptions as the root cause of inflated engagement metrics, redirecting product strategy toward genuine user acquisition, and protecting the Q4 launch date without impacting the executive relationship.
- Designed a structured scoring framework to prioritize 3 fundable GenAI pilots from a 40-idea backlog, applying impact feasibility analysis across four domains (personalized CX, fraud/AML, ops automation, expert copilots) with data readiness as a hard gate, separating true pilots from disguised 18-month data programs and enabling confident investment decisions.
- Unblocked a stalled GenAI underwriting deployment by reframing the model risk management review as a governance deliverable, proposing auditability requirements and an expert-in-the-loop launch tier that shipped augmentation immediately while building the evidence trail required for full automation approval.
- Anchored scope negotiations to discovery-phase personas and a shared vision, converting three mid-engagement feature requests into a structured post-MVP roadmap and protecting delivery timelines while maintaining strong sponsor alignment.

Athena AI(Project)
Product Manager

January 2024 – December 2024

- Led product vision and end-to-end roadmap for an AI Course Recommendation Engine, translating ambiguous university requirements into OKR-aligned outcomes across engineering, design, and academic stakeholders, accelerating delivery cycles by 30% and lifting student course completion by 35%.
- Launched MVP through lean product development with 200 pilot users, validating product-market fit and improving student engagement by 30%, with results compelling enough to earn full university funding for institutional deployment.
- Operationalized go-to-market strategy with three universities through FERPA/GDPR-compliant product integrations, RBAC, and stakeholder training, achieving 95% pilot adoption and unlocking sustained institutional acquisition across higher education

Zoho Corporation
Product Manager Intern

July 2024 – October 2024

- Drove A/B and multivariate testing programs in collaboration with product and UX, increasing engagement from 30% to 50% across 4,000 users and informing data-driven roadmap prioritization.
- Built and launched AI-driven personalization features through user segmentation, lifting customer retention by 20% and engagement by 15%.

Bharat Aviation Consulting
Senior Business Analyst

January 2020 – May 2023

- Led cross-functional integration of an NDC platform for a global airline client to digitize legacy GDS distribution processes, aligning business and technology stakeholders on a customer-focused product strategy and lifting ancillary offer conversion by 20%.
- Directed Azure cloud migration of legacy infrastructure, reducing data-center costs by 45% and accelerating release cycles for customer-facing features..

EDUCATION

Pace University, Seidenberg School of Computer Science and Information Systems
MS in Information Systems - **Concentration:** Business Intelligence

December 2024

Yashwantrao Chavan Maharashtra Open University
Bachelor of Science (B.S) Industrial Science - **Concentration:** MIS

May 2020
